

HYBRID FUNDING

The Trader Playbook.

The unfair advantage we hand every trader who joins Hybrid Funding. Rule-by-rule guides, position-sizing math, and the playbooks that pass evaluations.

INSIDE THIS PLAYBOOK

- The 5 rules every funded trader memorizes
- Trailing drawdown geometry (worked examples)
- The 30-day path to your first payout
- Position sizing math from \$5K to \$200K
- Five market paths: FX, Crypto, Futures, Equities, Predictive Markets
- How to earn \$100K+ referring traders

Empowering Traders. Funding Potential.

SS Equities	PropX	2:1	09:30 - 15:55 ET only
Predictive	Hybrid dashboard	None	Event-market hours

PIN THIS

If you remember nothing else: don't oversize, get to your trailing-DD lock threshold first, then ladder up to the profit target. That's how the playbook ends well.

02 · The 5 rules every trader memorizes

Memorize these before you trade a single tick. Every other rule on every program is a variation of one of these five.

Rule 1 — Profit target

The percentage gain you need to clear each phase. By program:

PROGRAM	PROFIT TARGET	PHASES	SPLIT
Forex 1-Step	10%	1	80%
Forex 2-Step	10% !' 5%	2	80%
Forex 3-Step	5% per phase	3	80%
Forex Instant Funding	No target — trade firm capital	0	80%
Forex Instant Funding Lite	No target	0	80%
Crypto 1-Step	9%	1	90%
Crypto 2-Step	6% !' 9%	2	90%
Futures Funded (4-Phase)	9% per phase	4	90%
Single Session Equities	10% (Eval only)	1	75-80 %
Predictive Markets	10% (Eval only)	1	75% (90% add-on)

Profit splits shown are baseline. Add the 90% Profit Share Upgrade (15% of plan price) to lift any program to 90%.

Rule 2 — Maximum drawdown

The single most important rule. Either trailing (moves up with closed balance, then locks at starting balance) or static (fixed). A breach below max drawdown = hard breach = account terminated.

PROGRAM	TYPE	MAX DRAWDOWN
Forex 1-Step	Trailing	6% on closed balance
Forex 2-Step	Static	8%
Forex 3-Step	Trailing	5%
Forex Instant Funding	Trailing	8%
Forex Instant Funding Lite	Trailing	5%
Crypto 1-Step / 2-Step	Static	6% / 9%
Futures Funded (4-Phase)	Trailing	5% on EOD balance
Single Session Equities	Trailing	3% on closed balance
Predictive Markets	Trailing	6% trailing equity high

Rule 3 — Daily loss limit

Caps how much you can lose in a single trading day. Calculated on previous day's end-of-day balance; resets at 5pm EST.

PROGRAM	DAILY LOSS LIMIT
Forex 1-Step / 3-Step	None
Forex 2-Step	4%
Forex Instant Funding	5%
Forex Instant Funding Lite	3%
Crypto 1-Step / 2-Step	3% (bidirectional Daily Cap)
Futures (per phase)	Effectively the trailing loss
Single Session Equities	2.5% intraday trailing
Predictive Markets	3% EOD equity; resets 5 PM ET

Rule 4 — Trading window

When you can have positions open. Violating the window = soft breach (auto-close) at best, hard breach at worst.

- Forex: 24/5. All positions auto-close 3:45pm EST Friday unless Weekend Hold add-on purchased.

- Crypto: 24/7. Weekend holds allowed.
- Futures: All positions and orders cancelled by 15:10 CST. No overnight or weekend holds.
- Single Session Equities: 09:30-15:55 ET only. Open past 15:55 = hard breach (Prohibited Practices).
- Predictive Markets: event availability follows each listed market; no leverage, and payouts require no open positions.

Rule 5 — Consistency

Designed to filter out lucky entries. Limits how concentrated your profit can be on a single day.

- Futures Funded: best day cannot exceed 25% of total profit (need 4+ trading days minimum to clear a phase).
- Single Session Equities Funded phase: 25% Consistency Score.
- Equities also requires a minimum of 3 profitable trading days at 0.50% - both Eval and Funded.
- Predictive Markets caps maximum profit per event at 0.5% of account value, aggregated across positions on that event.

03 · Position sizing

Most failed evaluations aren't from bad trades. They're from oversized positions. Position sizing is the only knob that keeps a string of losses from becoming a hard breach.

The 0.25 – 0.5% rule

Risk 0.25% to 0.5% of starting balance per trade. With a 30-pip stop on a major Forex pair (where 1 pip on a standard lot "H \$10), 0.5% risk on \$25K = \$125 risk = 0.42 lots.

Why this is slow (the math)

If you risk 0.5% per trade with a 1.5R win rate of 50%, you make 0.25% per trade on average. To hit a 10% target you need ~40 trades. If you trade 4 setups per day, that's two trading weeks. That's the right speed.

Risk budgets at every account size

ACCOUNT SIZE	0.25% RISK	0.5% RISK	10% TARGET
\$5,000	\$12.50	\$25	\$500
\$10,000	\$25	\$50	\$1,000
\$25,000	\$62.50	\$125	\$2,500
\$50,000	\$125	\$250	\$5,000
\$100,000	\$250	\$500	\$10,000
\$200,000	\$500	\$1,000	\$20,000

THE DISCIPLINE TRADE-OFF

Risking 1% per trade halves your trade count to target — but doubles your blow-up odds. Pros risk smaller, trade longer, and finish.

04 · Trailing max drawdown

The trailing max drawdown is calculated on closed balance, not equity. Two consequences most traders miss:

- Open floating profit doesn't trail the DD up. Only when you close the trade does the high-water mark move.
- Once your closed balance reaches the lock threshold (e.g. +6% on Forex 1-Step), the trailing locks at your starting balance permanently. From there, you have a hard floor.

Worked example: \$100,000 Forex 1-Step (6% trailing)

DAY	TRADE	CLOSED BALANCE	DD FLOOR
Start	—	\$100,000	\$94,000
Day 1	Closed +\$2,000 winner	\$102,000	\$96,000 (trailed up)
Day 2	Closed -\$1,500 loser	\$100,500	\$96,000 (no change)
Day 3	Closed +\$5,500 winner	\$106,000 (+6%)	\$100,000 (LOCKED)
Day 4+	Continue trading	Whatever	\$100,000 forever

THE PLAY

Ladder to your lock threshold first with conservative size. Then ladder up to the profit target with the floor permanently protecting you. Most blow-ups happen between Day 1 and the lock.

05 · Forex playbook

Five Forex programs. Pick by your style and your honest pass rate, not by the entry fee.

PROGRAM	TARGET	MAX DD	LEVERAGE	BEST FOR
1-Step	10%	6% trailing	1:20	Newer pros
2-Step	10% !' 5%	8% static	1:30	Methodical
3-Step	5% × 3	5% trailing	1:20	Slow, sure
Instant Funding	None	8% trailing	1:50	Track record
IF Lite	None	5% trailing	Up to 50:1	Cost-conscious

1-Step (most-picked)

- 10% target, 6% trailing DD, 1:20 leverage, no daily loss limit.
- Weekend hold: not allowed unless Weekend Hold add-on purchased.

Instant Funding Lite (the smart shortcut)

- Daily DD: 3%, max trailing DD: 5%, 25% consistency, 80% split (90% available add-on).
- 3% non-withdrawable profit buffer; first payout on demand, 14-day subsequent.
- Up to 50:1 leverage. Cheaper than full Instant Funding, payout-on-breach available.

06 · Crypto playbook

Crypto programs are tighter on daily moves but pay a higher baseline split (90%).

PROGRAM	TARGET	MAX DD	DAILY CAP
1-Step	9%	6% static	3%
2-Step	6% ! 9%	9% static both	3%

Leverage

- BTC and ETH: 5:1
- All other cryptocurrencies: 2:1

The Daily Cap (the rule that surprises new traders)

3% daily cap is bidirectional. If you make 3% in one day, your account locks until next session at 5pm EST. This caps single-day upside — plan for multiple smaller days, not one big day.

Other rules

- Weekend trading allowed (24/7 markets). Hold positions through Sunday without an add-on.
- Profit split: 90% on Crypto programs, baseline.

07 · Futures 4-Phase playbook

Hybrid Funding Futures supports DXtrade Futures and Volumetrica, with TickBlaze as an additional Futures platform option.

Phase rules (each phase is identical)

- Profit target: 9%
- Maximum trailing loss: 5%, trails on End of Day balance, locks at starting balance after +5%
- Consistency: best day cannot exceed 25% of total profit (4+ trading days minimum)
- EOD = 1600 CST. All positions and orders closed at 1510 CST. No overnight or weekend holds.

Contract limits

ACCOUNT SIZE	STANDARD CONTRACTS	MICRO CONTRACTS
\$25K	1	15
\$50K	3	30
\$100K	6	60
\$150K	9	90

Phase payouts (scale with account size — example on \$25K)

PHASE	TARGET	TRAILING DD	PAYOUT (\$25K)
Phase 1	9%	5%	\$500
Phase 2	9%	5%	\$750
Phase 3	9%	5%	\$750
Phase 4	9%	5%	\$1,500
Live Funded	—	—	90% split, no cap

DON'T FORGET

DXtrade Futures, Volumetrica, and TickBlaze are supported Futures options. Check the dashboard for available account and platform combinations.

08 · Single Session Equities

Day-trade S&P 100 equity products on PropX. All positions open and close within the same trading session — flat by 15:55 ET, every day.

PROPX PLATFORM

Official home: <https://propx.propaccount.com/>. Traders keep the same account, login, password, positions, history, and account data after the GoodyPro-to-PropX rebrand.

Rules at a glance

RULE	VALUE
Profit target (Eval only)	10%
Max drawdown (trailing on closed balance)	3.0%
Daily drawdown (trailing intraday)	2.5%
Daily profit cap (Eval only — soft breach)	2.5%
Min profitable trading days (Eval & Funded)	3 days at 0.50%
Profit split	80% / 20%
Payout cadence	14 days initial · 14 days subsequent
Min withdrawal	\$100
Consistency Score (Funded only)	25%
Lock upon payout	Yes (waiver: 25% add-on)
Payout on breach	No (available: 25% add-on)
Leverage	Up to 2:1
Commissions	\$0.02/share/side · \$0.50 min/transaction
Liquidity	Sourced directly from Nasdaq

TRADING WINDOW

09:30 – 15:55 ET only. Pre-market / extended hours not allowed. Position open past 15:55 ET = Prohibited Practices violation = hard breach.

09 · Predictive Markets

Trade the outcome of real-world events with a funded account. Instead of buying a currency pair or futures contract, you buy Yes or No shares tied to a clearly defined event question.

How the contract works

- Buy Yes if you believe the event will happen; buy No if you believe it will not.
- Shares are priced between \$0.00 and \$1.00. A 25-cent share costs \$0.25.
- Winning shares settle at \$1.00. Losing shares settle at \$0.00.
- There is no short selling and no leverage. To take the opposite view, buy the other side.
- Opening trades are allowed between \$0.20 and \$0.80. Positions may be closed later at any available price.
- Commission is 1% on opening trades only.

Worked example

Buy \$1,000 of Yes at \$0.25 and you hold 4,000 shares. If the market moves to \$0.40, the position is worth about \$1,600. If the event ultimately resolves Yes, 4,000 winning shares settle at \$4,000. If it resolves No, they settle at \$0. The full amount committed to an event can be lost, so event sizing matters.

RESEARCH LAYER

AI Market Radar is built into the Predictive Markets workflow to help traders scan event markets, volume, movement, and timing. It is a research tool, not a guarantee of outcome.

09 · Predictive Markets - Rules & Payouts

RULE	VALUE
Profit Target	10% - Evaluation only
Daily Drawdown	3% EOD equity; resets 5 PM ET
Max Drawdown	6% trailing equity high
Max Profit / Event	0.5% of account, aggregated
Evaluation Time	30 days; 60 with Double Time
Commission	1% on opening trades only
Opening Price Range	\$0.20-\$0.80
Leverage	None

Funded payout terms

- Funded split starts at 75/25 and can be upgraded to 90/10.
- First payout is available 7 days after funding; subsequent requests are every 7 days.
- Minimum payout is 2% of starting balance.
- Eligible profits are requested as a full withdrawal and there must be no open positions.

Evaluation pricing

ACCOUNT SIZE	ENTRY FEE	10% TARGET
\$5K	\$98	\$500
\$10K	\$188	\$1,000
\$25K	\$528	\$2,500
\$50K	\$988	\$5,000
\$100K	\$1,888	\$10,000

10 · Add-on decision tree

Five add-ons priced as a percentage of plan price. Pick based on your style — not because you're hedging your own discipline.

ADD-ON	COST	USE IT IF...
90% Profit Share Upgrade	15%	You intend to scale and take payouts. Pays back inside the first month for serious traders.
Weekend Hold (Forex only)	10%	You swing trade Sunday !' Friday. Skip if you scalp.
Payout-on-Breach	25%	You're on a tight-rules program (SS Equities, Instant Funding). Real safety net.
Lock-Upon-Payout Waiver	25%	You take small frequent payouts. Skip if you batch payouts.
33% Consistency Threshold	20%	You want a looser consistency rule (cheaper to clear).
50% Consistency Threshold	35%	You want to flex — tighter rule. Most traders skip both.

11 · How traders breach (and how not to)

The five most common breach patterns we see — and exactly how to avoid each one.

1. The Friday close trap (Forex)

All Forex positions auto-close at 3:45pm EST Friday unless you have the Weekend Hold add-on. Many traders are mid-swing and the auto-close locks them in unfavorably. Either close before 3:30 or buy the add-on if you swing.

2. The 'I'll just hold it longer' trap

Trailing DD moves with closed balance. Holding a winner doesn't trail the DD up. The opposite of what most traders intuit. Close winners to lock in trailing protection.

3. The consistency breach (Futures, Funded Equities)

You hit your profit target but your best day was 30% of total profit (above the 25% threshold). You don't fail — but you can't pass the phase. Solution: spread profits across more days, not bigger days.

4. The intraday equity breach (Single Session Equities)

Daily Drawdown is 2.5% intraday TRAILING. If you make \$500 then give \$700 back from peak equity that day, you breach — even if your closed balance is up. Trade smaller and use real stops.

5. The inactivity breach

Most programs require at least one trade every 30 days. Vacations and breaks have killed funded accounts. Set a calendar reminder.

IF YOU REMEMBER NOTHING ELSE

Three rules: small size, lock the trailing floor before laddering up, close winners. That's how traders pass.

12 · Why traders pick Hybrid Funding

SIX UNFAIR ADVANTAGES

We're not the only prop firm. We are the prop firm built for traders who want optionality, modern platforms, and rules that make sense.

ADVANTAGE	WHAT IT MEANS FOR YOU
5 market paths, 1 ecosystem	Explore Forex, Crypto, Futures, Single Session Equities, and Predictive Markets inside one Hybrid Funding ecosystem.
Single Session Equities	The only prop firm with day-traded S&P 100 equities on PropX. Direct Nasdaq liquidity, \$0.02/share. Built for stock day-traders.
Modern platform stack	MatchTrader, DXtrade, cTrader, Volumetrica, DXtrade Futures, and PropX, with TickBlaze now live.
Up to 90% profit splits	Industry-leading. The 90% upgrade pays for itself in your first 30 days of consistent trading.
Transparent rules	Full FAQ pages with worked drawdown examples on hybridfunding.co/faq . No 30-page hidden PDFs. We want you to pass.
Real community	TradeHouse Battles tournaments, real prizes including funded accounts. Trade your reps, win real capital.

13 · The first 30 days roadmap

From sign-up to your first payout. The exact path most successful traders follow.

Week 1 — Setup & calibration

- Pick your asset class and program (use the Add-on Decision Tree page).
- Pay the entry, complete KYC if Eval (mandatory before Funded).
- Install your platform. Run a single 0.25% risk test trade — confirm size math is right BEFORE you take a real position.

Week 2 — Lock the trailing floor

- Risk 0.25–0.5% per trade. Stack 1.5R+ wins.
- Goal: get to your DD lock threshold (+6% on 1-Step, +5% on 3-Step, +3% on Equities). Don't push for the target yet.
- Once locked, you have a permanent floor. The hard part is over.

Week 3 — Ladder to target

- Now ladder up to the profit target with the floor protecting you.
- Maintain consistency: spread profit across days. Best day cap matters.
- Document every trade. Most blow-ups happen here from impatience.

Week 4 — Pass + first payout

- Hit target !' automatic phase pass (or transition to Funded for single-step programs).
- Funded: request first payout on demand. Min withdrawal \$100.
- Subsequent payouts: 14–30 days depending on program.

REALISTIC TIMELINE

1-Step Forex with disciplined sizing typically clears in 2–4 weeks. Single Session Equities clears in 3–5 weeks (more session days needed for consistency).

14 · The compounding math of payouts

One funded account is fine. The math gets interesting when you understand how funded accounts compound on themselves.

Worked example — the scaling ladder

Trader Sarah passes a \$25K Forex 1-Step in week 3. She holds the funded account. Here's what year one looks like:

MONTH	WHAT HAPPENED	PAYOUT	TOTAL
M1	Passed \$25K. Paid 80% on +6% over month: \$1,200.	\$1,200	\$1,200
M2	Passed \$50K (re-invested some). +5% on each, two payouts.	\$3,000	\$4,200
M3	Added \$100K Single Session Equities. +4% all accounts.	\$5,200	\$9,400
M6	Three funded accounts: \$25K + \$100K Forex + \$100K Equities. Steady.	\$5,800	\$28,000
M12	Stable across three asset classes. Year one cash from prop firm trading:	—	\$72,000+

This is a worked example, not a guarantee. Your numbers depend on your strategy, discipline, and time in market. The point: passing one Eval and stopping is leaving money on the table.

Why most traders never get past month one

- They blow the funded account chasing big size after passing.
- They skip the 90% upgrade and lose 11% of every payout.
- They don't add a second account — but the entry on a second program is now a tax-deductible cost against payout income for most jurisdictions.

15 • Get paid to refer traders

AFFILIATE PROGRAM

This is the easy money play. If your network has any traders, you should be running our affiliate program. 5–20% commissions, weekly payouts, no cap.

Tier structure

TIER	SALES VOLUME	COMMISSION	AT 5 SALES/MO
Tier 1	First 1–9 sales	5%	\$300/yr
Tier 2	10–49 sales	10%	\$3,000/yr
Tier 3	50–100 sales	15%	\$9,000/yr
Tier 4	100+ sales	20%	\$24,000+/yr

Math assumes ~\$500 average plan price. A trader with a 5,000-follower trading Discord can hit Tier 3 inside a single quarter.

How to start in 30 seconds

- Visit [hybridfunding.co/affiliate](https://www.hybridfunding.co/affiliate), sign up.
- Get your trackable link. Drop it in your trading content (YouTube, Discord, X, IG).
- Real-time dashboard shows clicks, conversions, and unpaid balance.
- Weekly automatic payouts — no chasing.

Start the affiliate program in 30 seconds

Tier 4 traders earn \$24K+/year referring traders to programs they were going to use anyway.

<https://www.hybridfunding.co/affiliate>

16 · Join the TradeHouse Battles arena

TRADE LIVE, WIN FUNDED ACCOUNTS

TradeHouse Battles is the competitive trading arena built for serious traders. Real-time tournaments. Live leaderboards. Prizes including funded accounts worth \$100,000+. Free to enter many events.

What you can win

- Funded accounts (\$25K – \$100K+) directly from the leaderboard.
- Cash prizes paid weekly.
- Free upgrades to higher-tier programs.
- Custom merch and trading tool credits.

Why traders love Battles

- It's live and public — you build a track record other traders can verify.
- Tournament discipline is identical to passing an Eval. Reps for both.
- Network with other competitive traders. Trading is a lonely game; Battles fixes that.

Enter the next Battle

New tournaments every week. Free events monthly.

<https://www.hybridfunding.co/battles>

17 · Your next move

Choose your next move. Hybrid Funding now supports five market paths: Forex, Crypto, Futures, Single Session Equities, and Predictive Markets.

1. Pick your challenge tier

All programs, all asset classes, full pricing.

Start a challenge

Forex · Crypto · Futures · Single Session Equities · Predictive Markets

<https://www.hybridfunding.co/challenges>

2. Read the full FAQ

Every rule, every program, with worked examples — by asset class.

Read the FAQ

Hands-on rules guide for every program we run.

<https://www.hybridfunding.co/faq>

3. Earn from referrals

5–20% commissions on every referral. Weekly payouts.

Become an affiliate

Most active affiliates clear \$5K–\$20K/month.

<https://www.hybridfunding.co/affiliate>

4. Compete in TradeHouse Battles

Win funded accounts on the leaderboard.

Enter the arena

Free entry events every month. Funded accounts on the line.

<https://www.hybridfunding.co/battles>

5. Read the blog

Strategy guides, rule explainers, and asset-class deep dives. New posts weekly.

Read the blog

Free, no email required.

18 · Gold & CFD index leverage update

OCTOBER 18, 2026 · PENDING ACTIVATION

Hybrid Funding's trading infrastructure provider has announced that leverage for eligible Gold (XAUUSD) and CFD indices is scheduled to increase from 5:1 to 10:1 at the Sunday evening market open on October 18, 2026.

What 10:1 means

For the same \$10,000 notional position, required margin would decrease from approximately \$2,000 at 5:1 to \$1,000 at 10:1, before platform-specific charges and constraints. The dollar profit or loss on an unchanged position does not decrease. Larger positions can multiply losses.

Activation is not automatic

The new leverage is subject to firm-specific activation by our trading infrastructure provider. Until Hybrid Funding confirms activation for your instrument, platform and account, follow your actual platform-displayed margin requirement and leverage. Existing drawdown, loss limits and position restrictions still apply.

What's unaffected

This notice is specific to eligible XAUUSD and CFD indices. It does not announce changes to Forex currency pairs, oil, crypto, exchange-traded futures contract limits, or Single Session Equities.

Read the latest activation status and FAQ online: hybridfunding.co/blog/gold-cfd-indices-leverage-update-october-2026
